

## Clethodim

Clethodim is a cyclohexenone herbicide and acts as a fatty acid synthesis inhibitor. It is used to control annual and perennial grasses in a wide variety of broad leaf crops including soybeans, cotton, flax, peanuts, sunflowers, sugarbeets, potatoes, alfalfa and most vegetables.

**Action:** \* Systemic  
\* Selective  
\* Post-emergence application  
**CAS No.:** 99129-21-2  
**Technical Grade:** 90% min.  
**Formulations:** 24% EC  
**Packaging<sup>1</sup>:** \* 25kg drum (TC)  
\* 1 L bottle (EC)

| Crops        | Target Weeds                          | Dose (a.i. g/ha) |
|--------------|---------------------------------------|------------------|
| Peanut       | Annual and perennial gramineous weeds | 63~72            |
| Oilseed rape | Annual and perennial gramineous weeds | 54~72            |
| Soybean      | Annual and perennial gramineous weeds | 72~108           |
