

Cyproconazole

Cyproconazole is a steroid demethylation inhibitor. It is systemic fungicide with protective, curative, and eradicant action. It can be absorbed rapidly by the plant, with translocation acropetally. It can be used for control of foliar, Septoria, rust, powdery mildew, Rhynchosporium, Cercospora, Ramularia in cereals and sugar beet, and rust, Mycena, Sclerotinia and Rhizoctonia in coffee and turf.

Action: * Systemic

CAS No.: [94361-06-5] for (2RS, 3RS; 2RS, 3SR) isomers; [113096-99-4] for unstated stereochemistry; [94361-07-6] for (2RS, 3SR) isomers

Technical Grade: 98% min.

Packaging¹: * 25kg drum (TECH.)

<i>Crops</i>	<i>Target grasses</i>	<i>Dose (g a.i./ha)</i>
Cereals	Septoria, rust, powdery mildew, Rhynchosporium, Cercospora, and Ramularia	60-100
Coffee	Rust disease	20-50
Sugar beet	Leaf spot	40-100

¹NOTE: Upon request we provide customized packing
