

Flutriafol

Flutriafol inhibits ergosterol biosynthesis (steroid demethylation inhibitor), causing fungal cell wall collapse and inhibition of hyphal growth, contact and systemic fungicide with eradicant and protective action. Absorbed by the foliage, with translocation acropetally in the xylem. Control of a broad spectrum of leaf and ear diseases (including *Erysiphe graminis*, *Rhynchosporium secalis*, and *Septoria*, *Puccinia*, and *Helminthosporium* spp.) in cereals. Also used in non-mercurial seed treatment formulations to control the major soil-borne and seed-borne diseases of cereals.

Action: * Contact and systemic

CAS No.: 76674-21-0

Technical Grade: 95% min.

Packaging¹: * 25kg drum (TECH.)

<i>Crops</i>	<i>Target grasses</i>	<i>Dose (g a.i./ha)</i>
<i>Wheat</i>	<i>Rust disease</i>	<i>60-90</i>
<i>Strawberry</i>	<i>Powdery mildew</i>	<i>57-113</i>

¹NOTE: Upon request we provide customized packing
